

EZ - Meet

The Seamless Solution to Office Interactions

Product Description

- EZ – Meet is a cross-platform office calendar. It automatically manages an entire office's meeting and work schedule to create the most efficient meeting schedule possible.
- EZ – Meet supports different meeting priority settings and user permissions. For example, a high priority meeting will be scheduled ahead of a lower priority one, often changing the old schedule.

Advantages

- One calendar for an entire office – Knows what everyone is doing at all times!
- Cross-Platform – No need to worry about the program matching your office's operating system!
- Automatic meeting schedule – Just tell it who you need to meet with!
- Real time schedule changes – Adapts to your ever changing work environment!
- Daily and weekly display options – To suit everyone's personal preferences!

Architecture

- One database holds the full calendar with all meetings.
- One encrypted database manages user logins and permissions.
- A basic user interface allows creation of meetings as well as setting every user's work hours, according to user permissions.
- The entire program will be written in Java. The databases will be simple TXT files.
